PROBLEM

Managing financial risk is hard / inaccessible *for most users in DeFi and TradFi (defaults, insolvencies, protocol failures).*

Requires complex instruments *(credit analysis, hedging, counterparties, pricing) which are only available to large institutions.*

Current credit risk tools are opaque and centralized.

Users either take unhedged risk or stay out of the market entirely.

Credit risk management on-chain *for RWA and digital assets.*

On-chain Credit Default Swaps (CDS) allow users to
(hedge defaults, transfer risk, price credit exposure).

Smart contracts replace intermediaries, enabling
(automatic execution, transparent settlement, verifiable positions).

Open and permissionless access — *anyone with a wallet can participate.*

EASY TO USE

WITHOUT SIPRIFI

Upfront 20% (\$1 Milion)

min of contract: \$5 Milion

Retail Client, wants protection
over default of Lehman Brothers

Capital available
\$500,000

Siprifi

Contract terms + collateral

Upfront + YoY premium

Pay Upfornt to get the contract + YoY premium

Pay nominal price if event occurs

Buyer of protection

Premium: 100 bps YoY
Notional of protection: \$2000
Event to protect: LEHMAN BROTHERS

TTD of contract: 2 years

Issuer of protection

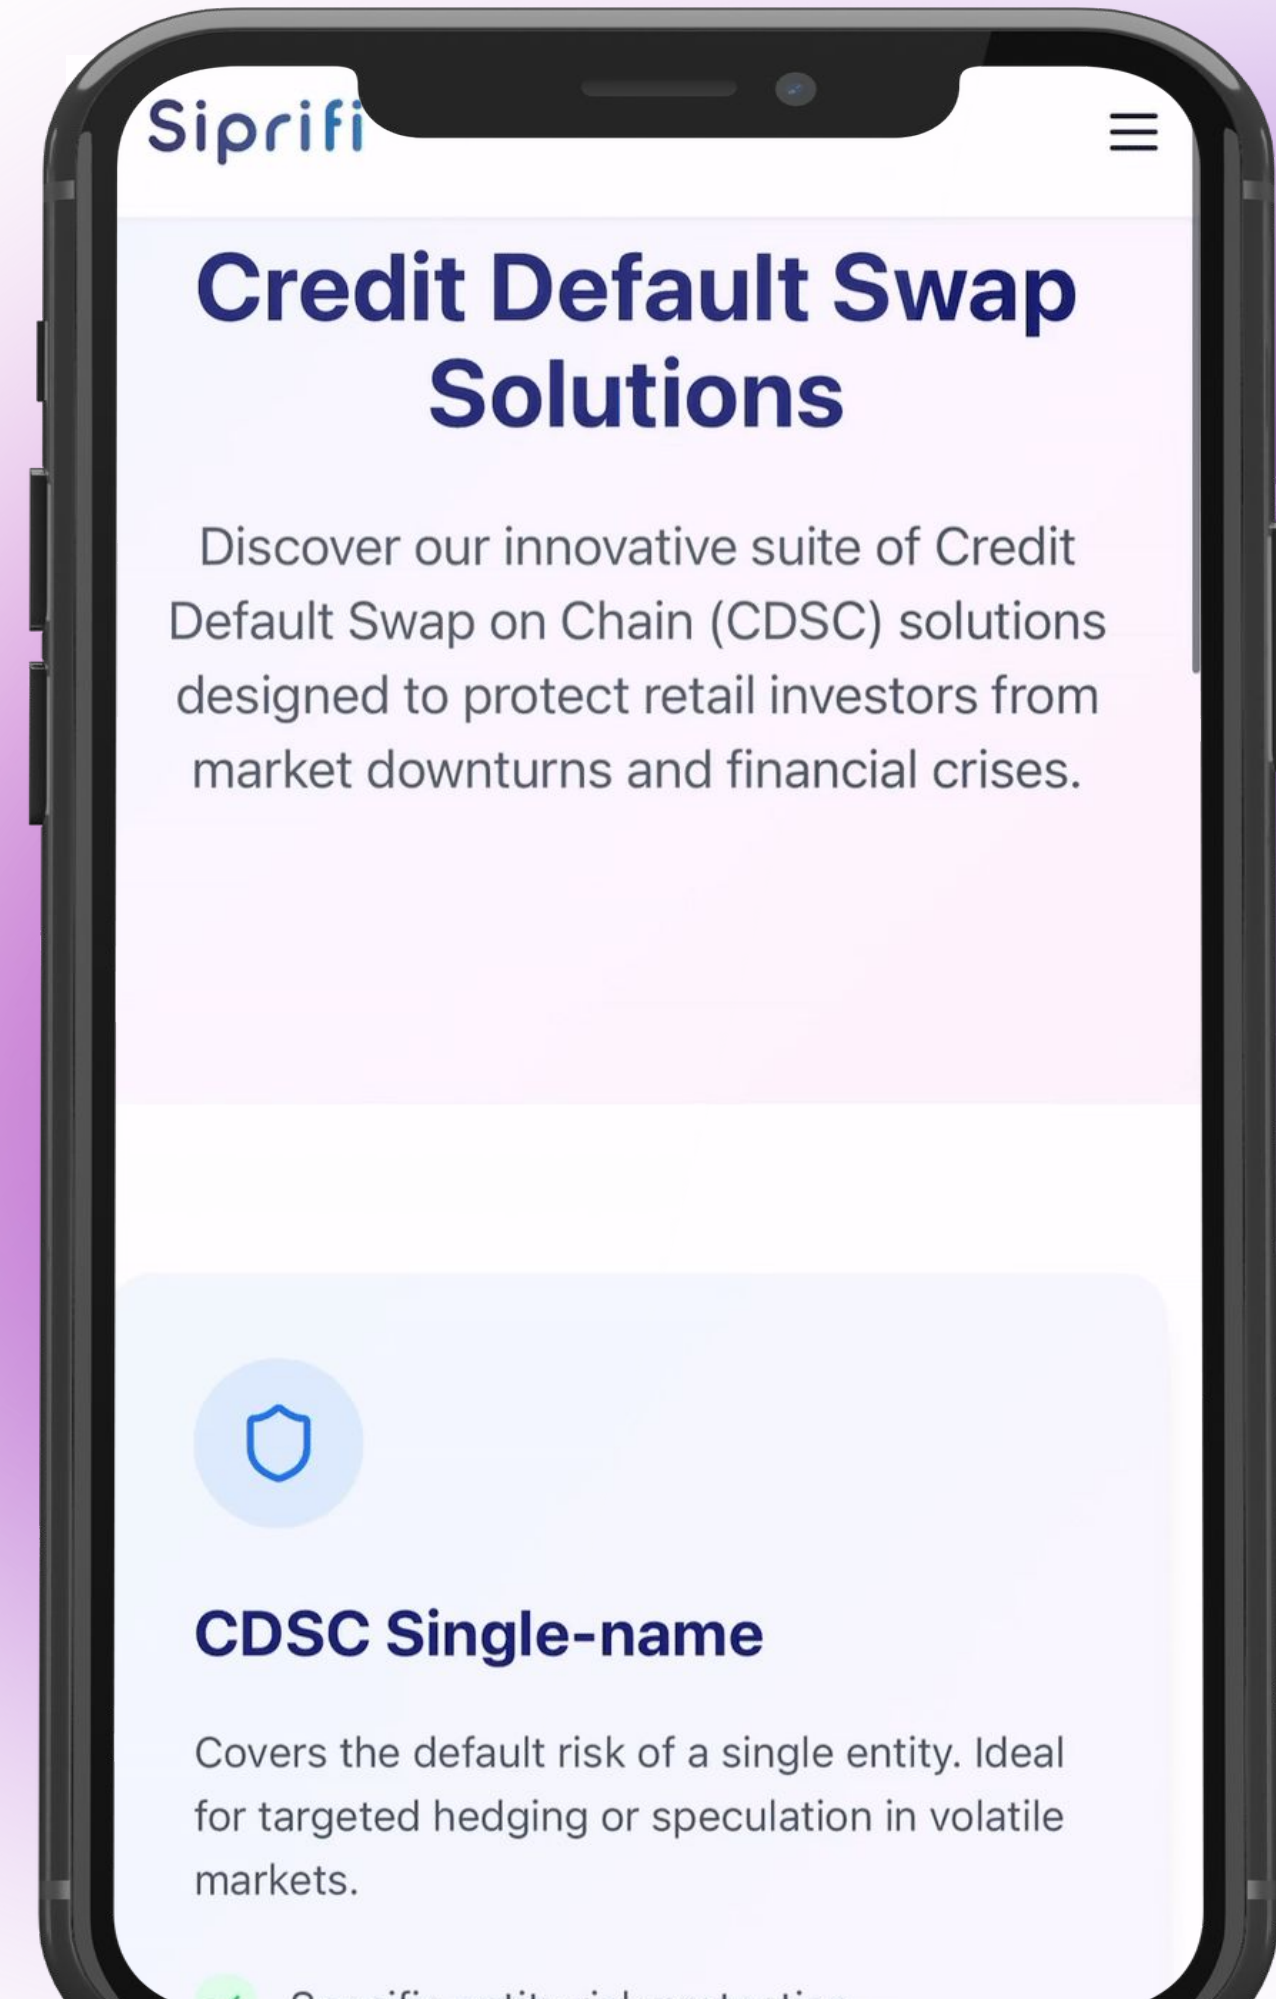

CREDIT DEFAULT SWAPS

for everyone

THANK YOU.
